1) a) Diode bloquer

$$5=0$$
, $V_0 < V_0$

b) Diode paramete

 $V_0 = V_0$, $T_0 > 0$

2/ hypothese: Diode paramete

 $V_0 = V_0$ $T_0 > 0$

$$\Rightarrow T_{R_1} = \frac{E - V_0}{R_1}$$

$$T_{R_2} = \frac{V_0}{R_2}$$

$$T_0 = \frac{E - V_0}{R_1} - \frac{V_0}{R_2}$$

$$= \frac{E - V_0}{R_1} - \frac{V_0}{R_2}$$

$$= \frac{E}{R_1} - V_0\left(\frac{1}{R_1} + \frac{1}{R_2}\right)$$
do diode set paramete is $T_0 > 0$

$$E > V_0\left(\frac{1}{R_1} + \frac{1}{R_2}\right)$$

$$E > V_0\left(\frac{1}{R_1} + \frac{1}{R_2}\right)$$

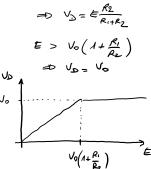

3/ Sup: la diode est bloquée

$$I_{D}=0$$
 $V_{D} < V_{D}$
 $\Rightarrow I_{R_{1}} = I_{R_{2}} = \frac{E}{R_{1}+R_{2}}$

et $V_{D} = E \frac{R_{2}}{R_{1}+R_{2}}$

la diode est bloquée si

 $V_{D} < V_{D}$
 $E < V_{D} \left(\frac{R_{1}}{R_{2}} + 1 \right)$
 $E < V_{D} \left(\frac{1}{R_{2}} + \frac{R_{1}}{R_{2}} \right)$
 $V_{D} = E \frac{R_{2}}{R_{2}}$
 $V_{D} = E \frac{R_{2}}{R_{2}}$

- en rome linéaire

 TC = BTB

 VBT 2 0,6 V

 VCG > VCE_1 20,2 V
- . lu zone sature Ze 2 PIB Ubre ≈ 0,6 U Vee 2 Veesat
- . bloqué Ze = 0 IB = 0

$$I_{c} = 5 \text{ mA}$$

$$\Rightarrow V_{cc} = R_{1} I_{B} + V_{BC_{0}} + R_{E} \cdot I_{E}$$

$$15 = R_{1} \frac{5 \cdot 10^{3}}{100} + 0,6 + 1000 \times 5 \cdot 10^{3}$$

$$R_{1} = \frac{15 - 0,6 - 5}{5 \cdot 10^{-5}} = \frac{9,4}{5} \cdot 10^{5} \cdot \frac{200 \text{ kg}}{5}$$
